

RAIN GARDENS

One of the easiest ways for a homeowner to help reduce stormwater runoff is to install a rain garden!!!

A rain garden is a slightly depressed area in your yard that temporarily collects runoff from rooftops or driveways. The runoff then infiltrates into the ground and provides water for the plants in the garden. They are easily installed and can be almost any size. Add to the attractiveness of your home and help protect local water quality, install a rain garden!!!

To learn more or for assistance planning a garden or any other stormwater controls, please contact the Town of Leland Stormwater Management Division at: (910)332-4652 or sspruill@townofleland.com
