PUBLIC NOTICE

TEMPORARY WATER SUPPLY BRUNSWICK FOREST April 4, 2016 through April 8, 2016

A temporary connection for main water supply will be established for the water system that serves Brunswick Forest and surrounding areas from April 4, 2016 through April 8, 2016. Customers should not experience any major fluctuations or major changes in the water supply.

The main water line that provides water from Brunswick County to Town of Leland water customers in the Brunswick Forest subdivision will be temporarily shut-off to allow for repairs that are needed due to a water main leak that recently developed.

During this time a temporary connection will be established to supply the water needs of the Town's customers, and you may notice a minor temporary change in your water pressure. Town staff will monitor the water pressure throughout the system during the repair period. The temporary water supply is from the same source and the same quality as the current water supply. Once the repair is made and the main water line is put back in service, pressure will return to normal operation.

The Town asks that you limit your outside water usage during this time (irrigation, car washing, etc.). Once the repairs are made and the water main is back in service, you will be notified that you may resume regular outside usage.

The work will be performed by Brunswick County Utilities, which has authority for that section of water line where the leak arose. If you have any concerns regarding the temporary water supply, please contact Jimmy Strickland, Public Services Director for the Town of Leland, at 910-332-4651 or e-mail jstrickland@townofleland.com.
